## Personal Profile

Danilo is a material engineer with a passion for technologies, he has worked for 2 years in front-end tech with React js, Next js, Firebase, and content management systems (CMS) such as Sanity and WordPress. He likes to keep updating on frontend-technologies and enjoys learning new skills and solving problems related to product and user experiences. Danilo wishes to merge the materials science and IT area.

## Work experience & projects

- October to December 2021

**Opportunity bank**
It is a project based on a website to mayoral Medellin which processes information for the requirement of loans and simulation of payments. The project is built with next js, formik and tailwind.

June to September 2021
**Comono website**
It is a website of Comono company and it is based on technologies such as next js , style jsx, and is connected with sanity as CMS.

- February to May 2021

**Closer a first product - MVP**
The main idea of the project was people can create different activities regard have skills and they are able to share them with others and receive some payment for each activity. I made it base on technologies such as Next js and Firebase
